DEFINE USER ROLES & PERMISSIONS

Inventory Management System (IMS)
for Thrifted & Branded Surplus Clothing
(with Item Approval Workflow)

Prepared By: Team SQ-Way

1. Purpose

This document defines the user roles, responsibilities, permissions, and access restrictions for the Inventory Management System (IMS). The system uses Role-Based Access Control (RBAC), allowing each user to access only the functions assigned to their role.

2. User Roles

Role	Primary Responsibility	Permitted Functions	Restrictions
Staff	Handles item intake and sales.	Add items; view items they added and their status; process sales for In Stock items.	Cannot approve/reject items and cannot sell Pending or Sold items.
Reviewer	Physically inspects garments and records the decision.	View Pending Items queue; inspect garments; approve items; reject items with a mandatory reason.	Only the recorded Reviewer decision can move Pending items to In Stock.
Admin	Handles inventory monitoring and reporting.	Search inventory; monitor stock and low-stock alerts; generate status reports.	Access is limited to Admin functions under RBAC.

3. Permission Matrix

Function	Staff	Reviewer	Admin
Log in with role-based account	Yes	Yes	Yes
Add new item	Yes	No	No
View own added items and status	Yes	No	No
View Pending Items queue	No	Yes	No
Record inspection result	No	Yes	No
Approve item	No	Yes	No
Reject item with reason	No	Yes	No
Process sale / checkout	Yes	No	No
Search inventory	No	No	Yes
Monitor stock / low-stock alerts	No	No	Yes
Generate status reports	No	No	Yes

4. System-Enforced Rules

- Every newly added item is automatically assigned Pending status.
- Only a Reviewer-recorded approval can change an item from Pending to In Stock.
- A rejected item returns to Pending and must include a rejection reason.
- Only In Stock items can be sold. Pending and Sold items are blocked from sale.
- Every status change is logged with the item, previous status, new status, user, and date/time.
- Access is controlled through RBAC and passwords are stored as hashed values.
